Contact Sheets (Digital)

Contact sheets are a very efficient way to view a roll of film. This traditional viewing method shows all the images neatly on one page and provides a good record of exposure accuracy. We no longer make our contacts using an enlarger, but instead we create them digitally. We start by first sleeving the film in a clear archival page; the page of film is then flatbed scanned, color corrected and printed on 8x10 glossy paper. Because of this, 35mm slide film can not be mounted after the contact sheet is made.

	B&W 8x10	C-41 8x10	E6 8x10
At time of film processing	7.50	7.50	7.50
<u>Not</u> at time of film processing	12.75	12.75	12.75

- Glossy paper only.
- Price does not include film processing.

include film processing

Available from: 35mm through 8x10 film formats.

Index Prints

Index prints are similar to contact sheets in that they conveniently show all the images one page. The big difference is that they are compiled from digital camera files or individual film scans and this opens up a variety of new possibilities. You can choose either 6, 12, 24, or 36 images per page. By pre-editing scanned images or digital camera files you can submit index print orders that are specifically tailored to your needs; make "best of" pages, as it were. We can even spiral bind a group of index prints to make a nice flip book. Index prints will even show your customized file name below each image. One nice feature of ordering index prints along with photofinishing is that each image on the index print has the same density and color correction that was used to print the roll. Index prints of film rolls do not show the film edge as contact sheets do.

Standard index prints hold 36 images, but you can also choose pages that hold 6, 12, or 24 larger images.

4x6	1.00
8x10	3.50
10x15	6.00

Turn-around: 24 hr.

4hr. Rush +100%

2hr. Rush +150%

Spiral Bind multiple index pages together to make a flip book - no extra cost

Available From: *All 35mm and medium format film types (color negative, B&W negative, and slides)
Digital camera files or scanned images.

<p>* Film must first be scanned in order to make index prints; scanning is not included in the cost of the index print, unless you are also ordering photofinishing prints from full uncut rolls.</p>
