## Mounting & Laminating

Professional mounting and laminating will protect and show off your prints to the best of their potential. We use pressure sensitive adhesives which offer the very best protection and longevity to photographic prints. We recommend that all prints 11x14 and larger be mounted for display. Mounting keeps the prints perfectly flat eliminating waves and glare on the print surface.

There are two basic types of mounts, "flush mount" and "museum mount". A "flush mount" is when the print is mounted even with the edges of the substrate. These are perfect for putting directly into a frame or hanging "as is" with Velcro. If you intend to window matt and frame your photograph then you will want a "museum mount". With a "museum mount" the print is centered on the substrate cut to the final size of your matt board. Because of the difficulty and precision involved with "museum mounts" there is an additional charge.

### Mounting Substrates:

**Foam Core** - Available in white only, Foam Core is an economical 3/16" thick foam board. Best suited for smaller prints or temporary displays.

**Gatorfoam** - Available in white or black, Gatorfoam is a unique, lightweight, structural panel for enhanced integrity, durability and moisture resistance. Gatorfoam's exceptional rigidity, surface quality and durability make it the best mounting board for photographs.

**Lamination:** Available in **glossy** or **lustre** surface, lamination protects and enhances the appearance of your photograph. Glossy provides a glasslike surface with bright saturated colors. Lustre will diffuse the light where glare is a problem and provide a beautiful soft look. Lamination will lengthen the life of an image by protecting it from moisture, physical damage, dirt, harmful gases and UV light. Lamination can be applied to a mounted or un-mounted photograph.
