Slides From Digital Files

We make excellent quality 35mm slides directly from digital files. Our Lasergraphics film recorder uses an electron beam to expose razor sharp images at 4K resolution. The color and clarity is outstanding. All film is processed in-house, mounted in plastic slide mounts and sleeved in clear archival pages.

File Formats: Slides from Digital Files are available from Jpeg, Tiff, PDF and PowerPoint file formats. If you are working with graphics software and need help saving the image files into a format listed above, please call for assistance.

Proportions: The proportions of a 35mm slide is 3:2. If you want your image to completely fill the slide you must crop or design with this proportion. Images that do not conform to this 2:3 aspect ratio will not be cropped, instead the extra space will be automatically filled with a black background.

File Size - 4K = 4096 x 2730 pixels = 32MB (uncompressed file size). Another way to look at this is 8"x12" at 341 ppi. This is the optimum resolution and will produce the highest quality slide. Most digital cameras are not capable of producing a 32MB file. Not to worry, we have seen files as small as 3MB to 4MB offer satisfactory results. Do not attempt to interpolate (resize) a small file up to 32MB, simply give us the biggest file you have and we will format it correctly. Files larger than 32MB offer no additional quality advantage.

8K - Our slide recorder is capable of imaging an extremely high resolution of 8K (8129 x 5460 pixels = 128MB). For standard slide presentations this is complete overkill. 8K slides do have their use for special archiving and medical / scientific research requirements.

Upload files - Use our "Digital Drop Box" or "FTP Transfer" to quickly get files to the lab.

Available From:

- Jpeg, Tiff, and PowerPoint file formats.

Options:

- **8K Resolution:** Add 100%

# of originals	# of copies from each		
	1st	2+	10+
1+	7.50	3.00	2.25
10+	6.00	2.75	2.00
25+	4.50	2.25	1.75

Turn-around: 48hrs.

24hr. Rush +50%
6-8hr. Rush +100%

8x12 at 300 ppi is our recommended file size.

Slides From Film

35mm slides can now be made from virtually any type of film (slide, color negative, B&W negative, 35mm, medium format and 4x5). We start by scanning the original film. The scan is then color corrected and digitally cleaned for dust. Finally we image the file to slide film using our Lasergraphics film recorder. This new technique offers extremely high quality, with far more flexibility and control than traditional slide duplication.

Available From:

- 35mm, Medium Format or 4x5 film.
- Color or B&W
- Negatives or Slides / Transparencies

- **4x5 Originals:** Add \$7.75 scan fee .

# of originals	# of copies from each		
	1st	2+	10+
1+	9.75	3.00	2.25
10+	7.75	2.75	2.00
25+	5.75	1.75	1.25

Turn-around: 72hrs.

48hr. Rush +50%
24 hr. Rush +100%
6-8hr. Rush +150%
